### Installation

You must finish the front side of the fireplace using a cement board.

**NOTE!** Do only use non combustible materials 6 inch surrounding the convection air grills.

**NOTE!** All grey colored parts have to be non combustible!

### Hearth extension

INSTALL THE HEARTH EXTENSION ONLY AS ILLUSTRATED!

A 20" x 12" (500 mm x 300 mm) minimum hearth extension made of non combustible material is required. Minimum dimensions of non-combustible hearth extension measured from door glass.

## Model: LUXUS® 40 See-Thru

### Hearth extension

To prevent any burning embers from coming in contact with the floor (between the fireplace and the hearth extension), insert a metal sheet under the front of the fireplace. This sheet must extend 4" (100 mm) on both sides of the fireplace and 2" (50mm) in front. You can also prevent embers from falling in the joint between the fireplace and the hearth extension by filling it with mortar grout.

Example: Luxus® Pier 28  
½" cement board on floor

Example: Luxus® Pier 28 On Floor  
½" cement board and metal ember strip

## Model: LUXUS® 40 See-Thru

### Frames

Frames available for all units.

Sliced View of the ledge

The integrated 'L' shaped ledge (A) can receive the non-combustible finishing (B) of your choice. Up to 300 lbs of material. It can be leveled by adjusting the long rods (C) on both sides of the fireplace.

**ATTENTION!** All «grey shaded area» must be non-combustible.

**ATTENTION!**  
maximum load **300 Pounds**

Use flexible material, such as high temp clear silicone, to make the joint between the cement board and the steel trim

A	'L' shaped ledge
B	Non-combustible finishing material
C	Leveling rods

### Minimum clearances to combustibles for convection air grills

Connect at least 4 gravity outlets 6 inch diameter to the convection air outlet ports.

The minimum distance between the convection air grills and the ceiling or other combustibles is 6.5 inches. Only use non combustible materials 6.5 inch surrounding the convection air grills.

For installation use flexible aluminium liner with 1 inch insulation.

The Gravity Distribution Kit may be used to heat rooms located above, behind and either side of the room where the fireplace is located. Note that, if the hot air outlets are located at various levels, the heat will tend to seek the one at the highest level. It is not permitted to connect two ducts together.

### Convection Air Distribution (Plenums)

#### One Inlet Plenum

#### Two Inlets Plenum

#### Four Inlets Plenum

## Model: LUXUS® 40 See-Thru

### Fresh air intake

To connect the fresh air directly to the firebox, it is recommended to use the 'Rectangular to Ø 6" Round Connector' (#1047515). Mount the connector directly to the unit. It can be mounted to the left side or the right side.

Rectangular to Ø 6" Round Connector (#1047515)

### Fresh air ducts

The fresh air ducts should be kept as short as possible to prevent pressure loss and to prevent cold from coming in.

### Butterfly valve

If you decide to connect separate combustion air it is recommended to install a butterfly valve to prevent condensation and avoid cold air from coming in when the fireplace is not in use. It should ideally be located as close as possible to the outside wall. It can be controlled from inside if it is not too far from the stove (cable length = 47"). DAMPER MUST BE FULLY OPEN WHEN FIREPLACE IS OPERATIONAL.

## Model: LUXUS® 40 See-Thru

### Inlet & Outlet

#### Flue Smoke Exhaust

Flue smoke and gases from the combustion chamber are evacuated by the chimney stack.

#### Convection Air Outlets

Convection air outlets direct warmed air back into the room for maximum heating efficiency.

#### Convection Air Inlets

Convection air inlets take in room air and direct it up and around the hot combustion chamber.

#### Combustion Air Inlet

Combustion air inlet directs fresh outside air into the combustion chamber.

SEE-THROUGH	Combustion Air Inlet	Flue Smoke Exhaust	Convection Air Inlets	Convection Air Outlets
Luxus® See-Thru 40	Rectangular to Round Connector	Ø 10"	one @ 11-5/16"x 3-3/8"	four @ Ø 6"

### Chimney installation

This fireplace is designed and approved for installation with the following brands of chimneys measuring 10" (250 mm) in diameter as well as a minimum of 15' (4.6 m) and maximum of 45' (13.5 m) in height. (The anchor plate is not included with the unit. Use only a chimney certified as UL 103HT or ULC S-629.)

Chimney Manufacturer	Brand	Type	Tested and Listed to	Inner Diameter
Duravent	DuraTech DT	1" Solid pack 10"	ULC-S604, ULC-S610	10"
Security chimney	Secure Temp ASHT+	1" Solid Pack	ULC-S604, ULC-S610	10"
ICC chimney	RIS	1" Solid Pack	UL-103 HT	10"
Selkirk	Ultimate Plus	1" Solid Pack	ULC-S604, ULC-S610	10"

Chimney Manufacturer	Components	Type / Brand	Part Number / Product Code
Security chimney	Rafter protector at the roof level if chimney is enclosed at the attic level	Secure Temp ASHT+	Ref. 10FR(10")
	Requires insulated attic radiation shield unless chimney is enclosed at the attic level	Secure Temp ASHT+	Ref. 8XRSA2 (10")
DuraVent	Roof radiation shield	Secure Temp ASHT Secure Temp S2100	ref. 10fr(10")
	Attic insulation shield	Secure Temp S2100 Secure Temp ASHT	ref. 8XRSA2(10")

### Transportation locks

#### Unlock transportation lock

Once the fireplace has been taken off the crate, unlock the counterweights using a socket-wrench size 13mm or 1/2". Remember to perform this operation before inserting the fireplace into the enclosure.

Tool:  
socket wrench

To unlock the transportation lock, open the cover. Then loosen the screw with the socket wrench. Turn the socket wrench to the left. Then close the cover. Do this on both sides.

## Model: LUXUS® 40 See-Thru

### Door opening

Use the «operational tool» to open and close the door

Operational tool

Connection point

### CAUTION!

The «operation tool» has a spring. If you let go the «operation tool», it jumps back from the connection point.

The «operation tool» is heavy. Do not drop it on the floor or on your foot.

Position the «operational tool» on the connection point

Move the door up and down
